FEEC diagram gallery

These diagrams are adapted from mathematical relations in the cited sources. Their labels can be changed without asserting that any particular maps commute.

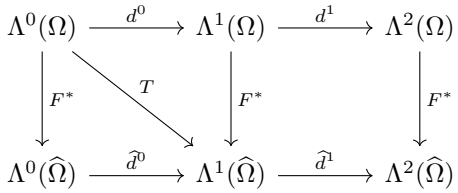

Conforming finite element projection

The conforming sequence uses the projection notation of Güçlü, Campos Pinto, and Hadjout, *Journal of Scientific Computing* (2023), doi:10.1007/s10915-023-02351-x.

Pullback and exterior differentiation

The reference to physical map follows the pullback convention in Arnold's FEEC notes. The diagonal arrow demonstrates a connection between different degrees; it is a separate, explicitly named map.

The additional T arrow is illustrative and carries no implied naturality identity.
